

advances in principal component pdf

Principal component analysis (PCA) is a statistical procedure that uses an orthogonal transformation to convert a set of observations of possibly correlated variables (entities each of which takes on various numerical values) into a set of values of linearly uncorrelated variables called principal components. If there are observations with variables, then the number of distinct principal ...

Principal component analysis - Wikipedia

Principal Component Analysis (PCA) Principal Component Analysis (.pdf) . Principal component analysis (also known as principal components analysis) (PCA) is a technique from statistics for simplifying a data set. It was developed by Pearson (1901) and Hotelling (1933), whilst the best modern reference is Jolliffe (2002).

Face Recognition Using Principal Component Analysis Method

Humic substances are organic compounds that are important components of humus, the major organic fraction of soil, peat, and coal (and also a constituent of many upland streams, dystrophic lakes, and ocean water). For a long era in the 19th and 20th centuries, humic substances were often viewed through a lens of acid-base theory that described humic acids, as organic acids, and their ...

is performed with the objective to explain as much as of the variance in X by a linear combination of a complementary set of scores $T = (t_1, \dots, t_a)$ and loadings $P = (p_1, \dots, p_a)$. In order to differentiate the data decomposition by PCA from other latent projection methods, the LVs are referred to as principal components (PCs).
