

childhood mortality from rheumatic pdf

Rheumatic fever (RF) is an inflammatory disease that can involve the heart, joints, skin, and brain. The disease typically develops two to four weeks after a streptococcal throat infection. Signs and symptoms include fever, multiple painful joints, involuntary muscle movements, and occasionally a characteristic non-itchy rash known as erythema marginatum.

Latent tuberculosis (LTB), also called latent tuberculosis infection (LTBI) is when a person is infected with Mycobacterium tuberculosis, but does not have active tuberculosis. Active tuberculosis can be contagious while latent tuberculosis is not, and it is therefore not possible to get TB from someone with latent tuberculosis.

INTRODUCTION: While new studies on the negative effects of pesticides on human health are completed each year by major government and university research centers, the majority of these studies remain "silent" in medical journals and do not reach the public via major news outlets. This reduction in public awareness appears to have worsened over the past several decades.

5. Biomarkers That Correlate with Histology or Prognosis of Lupus Nephritis. Tables 3 and 4 summarize the biomarkers that have been associated with histological classes or renal function deterioration in lupus nephritis [83â€“91]. The quest continues for biomarkers that can differentiate different histological classes of lupus nephritis.
