Human feces (or faeces in British English; Latin: *fæces*) are the solid or semisolid remains of the food that could not be digested or absorbed in the small intestine of humans, but has been rotted down by bacteria in the large intestine. It also contains bacteria and a relatively small amount of metabolic waste products such as bacterially altered bilirubin, and the dead epithelial cells from ...

Skin color is one of the most conspicuous ways in which humans vary and has been widely used to define human races. Here we present new evidence indicating that variations in skin color are adaptive, and are related to the regulation of ultraviolet (UV) radiation penetration in the integument and its direct and indirect effects on fitness.

The evolution of human skin coloration - ScienceDirect

modern color models. The first six pages have examined the fundamental aspects of color perception – the trichromatic mechanism, the three colormaking attributes that describe color sensations, the geometry of color (including the hue circle, opponent functions and response compression), the many basic forms of color, and the complex effects of context, contrast & adaptation, and finally the ...
