Tributyltin (TBT) is an umbrella term for a class of organotin compounds which contain the (C<sub>4</sub>H<sub>9</sub>)<sub>3</sub>Sn group, with a prominent example being tributyltin oxide. For 40 years TBT was used as a biocide in anti-fouling paint, commonly known as bottom paint, applied to the hulls of ocean going vessels. Bottom paint improves ship performance and durability as it reduces the rate of biofouling (the ...

### **Tributyltin - Wikipedia**

Biofouling or biological fouling is the accumulation of microorganisms, plants, algae, or animals on wetted surfaces. Such accumulation is referred to as epibiosis when the host surface is another organism and the relationship is not parasitic.. Antifouling is the ability of specifically designed materials and coatings to remove or prevent biofouling by any number of organisms on wetted surfaces.

Highlights Microplastics are emerging pollutants in the marine environment. This paper discusses the possible origins and the ecological impacts of these. They concentrate low-level pollutants in water. These become bioavailable via ingestion to marine organisms.
