tions require operational corrosion tests or must be based on the user's operational experience. The specifications in the tables refer to laminar corrosion attack. The risk of local corrosion attack (pitting corrosion, stress corrosion cracking) has not been taken into account.

Corrosion resistance table Stainless steels can be susceptible to certain localised corrosion mechanisms, namely crevice corrosion, pitting, intercrystalline corrosion, stress corrosion cracking and bimetallic (galvanic) corrosion.

reactive metal equipment. Knowing how to machine, form and weld tantalum, niobium, zirconium and titanium is imperative. Our comprehensive knowledge of manufacturing preparations and procedures allows TITAN to fabricate reactive metal equipment in the most efficient way possible. TITAN pays particular attention to quality.

CORROSION RESISTANCE TABLE NYLON = Polyamide Nylon is one of the first thermoplastics used as rubber cords, belts, sports apparel, and structural parts such as valve bearings. Nylon has excellent resistance to oils and solvents, but limited resistance to alkalis and acids. Its application is limited to a maximum temperature of 210°F.

Corrosion & Corrosion Resistance Galvanic Corrosion The issue of corrosion poses an extreme concern in design. One ... the table in both their active and passive conditions. ... it produces a highly effective localized battery with resultant corrosion and metal attack.

Corrosion & Corrosion Resistance

A major problem in process industry is corrosion of metals in pipes, valves and other parts of the constructions. Acceptable combinations of more or less aggressive fluids and commonly used materials are indicated below.

applications, however, corrosion resistance is the most important property. The commercially pure (c.p.) and alloy grades typically used in industrial service are listed in Table 1. Discussion of corrosion resistance in this brochure will be limited to these alloys. In the following sections, the resistance of titanium to specific environments is

corrosion resistance. The Tefzel lining acts as a barrier, which prevents the process fluid from coming in contact with the underlying metal and causing corrosion cracking. Tefzel is not, however, a universally corrosion-resistant material. Tefzel is embrittled by strong acids and strong bases. Certain organic solvents and temperatures can

Corrosion Resistance Tables The tables that follow show the maximum recommended temperature for resins when exposed to the listed chemicals and concentrations. However, selecting a resin often involves more than simply checking its corrosion resistance. Mechanical properties can be equally important.
