Fatigue stress initiation in pipelines has been attributed to corrosion defects whereas the growth is enhanced by cyclic loading caused by the operating pressure of the transported fluid. This work reviews the concept of oil and gas transmission

### **Pipeline Fatigue Failures in Corrosive Environments**

A first of its kind review on use of experimental designs in HPLC method development and validation. Deals with recent advances in mathematical modeling, screening and optimization designs.

### **An overview of experimental designs in HPLC method**

Oxidative stress is a normal phenomenon in the body. Under normal conditions, the physiologically important intracellular levels of reactive oxygen species (ROS) are maintained at low levels by various enzyme systems participating in the in vivo redox homeostasis. Therefore, oxidative stress can also be viewed as an imbalance between the prooxidants and antioxidants in the body.

A DNA microarray (also commonly known as DNA chip or biochip) is a collection of microscopic DNA spots attached to a solid surface. Scientists use DNA microarrays to measure the expression levels of large numbers of genes simultaneously or to genotype multiple regions of a genome. Each DNA spot contains picomoles (10<sup>-12</sup> moles) of a specific DNA sequence, known as probes (or reporters or oligos).

Hormesis is any process in a cell or organism that exhibits a biphasic response to exposure to increasing amounts of a substance or condition. Within the hormetic zone, there is generally a favorable biological response to low exposures to toxins and other stressors. Hormesis comes from Greek ἁρμῆσις "rapid motion, eagerness", itself from ancient Greek ἁρμῆν "to set in motion, impel ...
