

feedback control of dynamic pdf

Preface Striking developments have taken place since 1980 in feedback control theory. The subject has become both more rigorous and more applicable.

Feedback Control Theory

There are two types of feedback: positive feedback and negative feedback. As an example of negative feedback, the diagram might represent a cruise control system in a car, for example, that matches a target speed such as the speed limit. The controlled system is the car; its input includes the combined torque from the engine and from the changing slope of the road (the disturbance).

Feedback - Wikipedia

Control theory in control systems engineering is a subfield of mathematics that deals with the control of continuously operating dynamical systems in engineered processes and machines. The objective is to develop a control model for controlling such systems using a control action in an optimum manner without delay or overshoot and ensuring control stability.

You may have been taught to do this with a graphic EQ, but there is a better way. Follow my guide to controlling feedback onstage and mix in fear no more.
