

### **gas air and spring pdf**

BASIC PRINCIPLES OF AIR SPRINGS GENERAL DISCUSSION heat to dissipate. The higher temperature of the gas results in a higher gas pressure and, therefore, a higher spring rate. When the heat of compression is partially retained within the gas, a polytropic rate results. This occurs during most normal

area of the piston rod. Weforma gas springs are filled to a pressure determined in accordance with the customer's requirements (extension force F 1). The extension force always refers to the value F 1, measured at 20°C ± 2°C and with a downwards facing piston rod. F 1 = extension force with extended piston rod F 2
