

### **mathematical intuitionism introduction to pdf**

In the philosophy of mathematics, intuitionism, or neointuitionism (opposed to preintuitionism), is an approach where mathematics is considered to be purely the result of the constructive mental activity of humans rather than the discovery of fundamental principles claimed to exist in an objective reality. That is, logic and mathematics are not considered analytic activities wherein deep ...

Mathematical logic is a subfield of mathematics exploring the applications of formal logic to mathematics. It bears close connections to metamathematics, the foundations of mathematics, and theoretical computer science. The unifying themes in mathematical logic include the study of the expressive power of formal systems and the deductive power of formal proof systems.

La postura de los formalistas, tal como fue enunciada por David Hilbert (1862-1943), es que la matemática es sólo un lenguaje formal y una serie de juegos. De hecho, Hilbert usó el término "juego de fórmulas" en su respuesta de 1927 al criticismo de L. E. J. Brouwer: "And to what has the formula game thus made possible been successful?"

En mathématiques, un ensemble est dit dénombrable, ou infini dénombrable, lorsque ses éléments peuvent être listés sans omission ni répétition dans une suite indexée par les entiers. Certains ensembles infinis, au contraire, contiennent « trop » d'éléments pour être parcourus complètement par l'infini des entiers et sont donc dits « non dénombrables ».
