This is the chemical engineering questions and answers section on "Process Control and Instrumentation" with explanation for various interview, competitive examination and entrance test. Solved examples with detailed answer description, explanation are given and it would be easy to understand.

Process Control and Instrumentation - Chemical Engineering

Automatic process control in continuous production processes is a combination of control engineering and chemical engineering disciplines that uses industrial control systems to achieve a production level of consistency, economy and safety which could not be achieved purely by human manual control. It is implemented widely in industries such as oil refining, pulp and paper manufacturing ...

Parker Instrumentation provides highly engineered flow control components and systems. These components range from basic compression fittings, pipe fittings, needle valves, ball valves, compact stream switching valves to modular fitting and valve packages.

Parker Instrumentation - Highly Engineered Flow Control

Instrumentation is a collective term for measuring instruments used for indicating, measuring and recording physical quantities, and has its origins in the art and science of scientific instrument-making.. The term instrumentation may refer to a device or group of devices used for direct reading thermometers or, when using many sensors, may become part of a complex industrial control system in ...
