

time series analysis forecasting pdf

A time series is a series of data points indexed (or listed or graphed) in time order. Most commonly, a time series is a sequence taken at successive equally spaced points in time. Thus it is a sequence of discrete-time data. Examples of time series are heights of ocean tides, counts of sunspots, and the daily closing value of the Dow Jones Industrial Average.

Time series forecasting can be framed as a supervised learning problem. This re-framing of your time series data allows you access to the suite of standard linear and nonlinear machine learning algorithms on your problem.

Time Series Forecasting as Supervised Learning

Forecasting is the process of making predictions of the future based on past and present data and most commonly by analysis of trends. A commonplace example might be estimation of some variable of interest at some specified future date. Prediction is a similar, but more general term. Both might refer to formal statistical

- [Voiceover] Hi, I'm Wayne Winston. In this course I'll be showing you how to create and evaluate forecasts. We'll start by exploring the nature of time series data with scatter plots and moving average plots. Then we'll examine data bias and accuracy using methods including mean apps through deviation and sum of squared errors. Next we'll try out trend lines for forecasting.
