In probability theory and statistics, the chi-squared distribution (also chi-square or Ϊ‡ 2-distribution) with k degrees of freedom is the distribution of a sum of the squares of k independent standard normal random variables. The chi-square distribution is a special case of the gamma distribution and is one of the most widely used probability distributions in inferential statistics, notably ...

In probability theory and statistics, the noncentral chi-squared or noncentral distribution is a generalization of the chi-squared distribution.This distribution often arises in the power analysis of statistical tests in which the

null distribution is (perhaps asymptotically) a chi-squared distribution; important examples of such tests are the likelihood-ratio tests

This Squared Lost in Time design is worked around the popcorn flower that makes the center of the square. You can use any yarn and hook size for this pattern since itâ€™s repeatable and the size is very easy to customize.
